BERRY and VEGETABLE PLANTS
SEED

Farms Barnsboro

P. O. SEWELL, New Jersey

TO OUR FRIENDS AND CUSTOMERS

We are glad to present our 30th annual catalogue in its usual modest and sincere form. The many patrons who have been with us since the early days of our business prove that reliable facts followed by satisfaction is our best advertisement.

We take this means of thanking all who have patronized us in the past and assure you of the same satisfaction in the future.

Very sincerely yours.

FIELD PLANT FARM

INSTRUCTIONS

TIME TO ORDER —As soon as possible after receiving this catalog.

That is particularly so with berry plants. We can reserve the varieties you want and ship as early in the spring as it is possible for you to prepare the land for them. This is the first important step toward a successful berry patch. When planting in the early spring you are certain of getting a good stand without watering and nursing them along, which is often required later in the season when it becomes hot and dry.

ALL OUR PLANTS ARE FRESHLY DUG; packed in light ventilated crates with plenty of damp moss and shipped promptly, guaranteed to reach you in good condition. Should they arrive in poor condition which might happen through delay in transit or some cause beyond our control, accept the plants and have your Express Agent or Postman make note of same, Advise us at once and we will make good all just claims, when made on receipt of goods.

GUARANTEE

We guarantee our stock to be true to name and free from disease. We use every precaution to keep it so and believe we have been able to do it almost one hundred percent in the thirty years that we have been in business. Should any prove otherwise we will replace them on proper proof but in no case will we be responsible for any greater amount than the purchase price of stock.

PAYMENT should be made to the Field Plant Farm by Money Order, Bank Draft or personal check. However, we will reserve your order for a deposit of one fourth of the total amount. The balance can be paid before shipment or will ship with balance C.O.D.

STATE OF NEW JERSEY

DEPARTMENT OF AGRICULTURE TRENTON

No. 302

Trenton, N. J. September 1 1943

THIS IS TO CERTIFY that we have this 17th day of August, 1943, in accordance with the provisions of Title 4 Chapter 7 of the Revised Statutes of the State of New Jersey, caused to be inspected by a duly appointed inspector the berry nursery stock growing in the L. E. Field nursery of L. E. Field, proprietor, at Farnsboro, in Gloucester County, New Jersey, and have found the same apparently free from San Jose scale, and other dangerously injurious insect pest and dangerously destructive plant diseases.

This certificate expires Sept. 1, 1944 and covers only stock actually in the nurseries when examined.

HARRY B-WEISS Chief, Bureau of Plant Industry.

W. H. ALLEN Secretary of Agriculture

Take Notice

STRAWBERRY PLANTS are very short this year, due to the extremely dry weather this past summer. It would be advisable to make a second choice when ordering berry plants as it will save both you and I time if we should be out of one variety that you order. All our berry plants have been inspected for the Red Stele disease by the New Jersey Department of Agriculture. We will ship berry plants until May 20th.

To save our customers from writing for a catalogue each season, which some of you do we wish to tell you it is generally mailed the first week of March each year.

We will do every thing within our power to get your order out on time but we have a lot of inexperience help which slows things up sometimes. Most all our shipments were made within three days of the date requested in the 1943 peak planting season.

A FIELD OF OUR STRAWBERRY PLANTS

VARIETIES of STRAWBERRIES

PATHFINDER. *per.* A new variety, originating at the New Jersey Agriculture College. The result of a cross between Premier and Aberdeen, very vigorous in plant growth, making a sufficient number of plants for a good bed but much larger and heavier foliage than either of its original parent plants, also very resistant to plant diseases. Will produce a large crop of fruit, medium to large in size, uniformly smooth and regular in shape, good color, moderately firm and a good flavor, a proven new variety.

BLAKEMORE. *per.* Early. A good early variety that has been thoroughly tested. It is a vigorous grower, making plenty of good strong plants. Berries larger than the average extra early variety, bright red in color, good flavor and firm flesh, making it a good commercial berry.

PREMIER. *per.* (or Howard No. 17) Early. This is one variety sold under either name. Size medium to large, good color and a firm berry, plants very vigorous making good beds and more resistant to frost than other varieties, you can not go wrong on them.

SUCCESS. *per.* Medium Early. An old reliable that we still recommend for the home garden. It makes good strong plants and plenty of them to form a sufficient bed for a good crop of fruit, the fruit is extra large, excellent flavor and has a long picking season, in fact all any one could desire in a home berry or a near by market, it is not a good shipper.

FAIFAX Rper. Early

The most wonderful introduction of strawberries in recent years. It makes a moderate number of exceptionally strong heavily rooted plants, very productive of big beautiful berries.

The fruit is the best of flavor, rich red in color with bright green cap. It starts picking a few days later than the Premier. It is exceptionally firm and stands distant shipping well also desirable for the home garden or road side market as it has the quality and good appearance.

CATSKILL per.

A midseason variety popular with many growers. It makes plenty of good strong plants, a heavy producer of large berries of good quality, light red in color, with large green caps making it very attractive and sells well on the market.

FAIRFAX PLANTS

DORSETT per.

This new berry has already become a favorite with many growers. It ripens with Premier makes a vigorous growth of foliage, not as large a plant as the Fairfax but makes them more freely, often requiring thinning and spacing.

The fruit is large, light in color, good flavor and firm texture making it a good all around variety for market or home garden.

ABERDEEN per.

This variety outyields any other under favorable conditions. The fruit averages large throughout the season, a bright shiny red in color, uniform in size and shape and has a beautiful green calix that adds much its appearance.

CHESAPEAKE. Per Late—The choice of berries with many growers, but it has its fault, unless planted on extra good land and good attention is given it, it does not make a sufficient bed to produce a good crop of berries. The fruit is large and the best of quality, but must be planted on good rich loomy soil for the best results.

GANDY. Per. Late—The latest of all summer varieties, plants strong and vigorous, berries extremely large and extra firm and good color. Not considered the best table berry but being extra fancy and a good shipper it is a profitable commercial variety.

LUPTON. Per. Late—This berry originated in South Jersey and has become very popular, it makes extra large plants and a sufficient number to form a good fruiting bed. It is a handsome berry of excellent quality and we can recommend it, either for commercial planting or the home garden.

BIG JOE. Per Mid-Season—An extra large berry, coloring all over alike, the texture is one of the best, giving it excellent shipping qualities, making it a favorite with many growers.

WM. BELT. Per. Midseason—The best yet of its season. Plants vigorous and prolific, fruit, medium to large, the best of all flavors, most perfect in shape, brilliant glossy red and ripens all over alike.

NORTH STAR

A wonderful new variety, originated by the Department of Agriculture. This variety makes a small number of plants and heavy foliage which protects the blossoms from frost, making it desirable in localities where late frost are concerned. The berries are extra large, bright red in color, of good flavor and hold up well.

BIG BILL

A late berry. Growing large wedge shape berries on a heavy stem, bright red color, firm flesh and good flavor. This berry is popular in South Jersey with some growers, it likes moist soil

DRESDEN

A midseason variety. Light red in color, medium to large in size. This berry sets more fruit than any variety we have ever tried out, it should be planted only in the far north.

Bunch of MASTODON Plants

Everbearing Varieties

The everbearing has many advantages over the summer varieties. If planted in the spring they will produce a crop of fruit in the late summer and fall of the same year they are planted. The buds should be removed until the last of July so they will become thoroughly rooted before fruiting. They will produce fruit until freezing weather, then you will have your fruiting bed for another year.

Another great advantage is (particularly in localities where late frost often catch the blossoms and destroy the crop of other varieties) The everbearing are so persistent in blooming, they will continue to bloom until they do produce a crop, while the summer varieties are through for that season if the bloom has frozen.

MASTODON

We believe this variety to still be the leader in everbearing strawberries. Very vigorous in plant growth making a limited number of exceptionally large plants. The fruit is large, of good quality and attractive in appearance. The one variety that will grow most anywhere.

GEM

This everbearing variety became very popular. The plant is very vigorous making medium size plants.

It is very productive, fruit medium to large, light red in color and very firm in texture holding up well.

We believe it will produce more fruit in the fall than any other everbearing variety we have tried out.

VEGETABLE PLANTS

PREPARING COLD FRAMES

CABBAGE

Yellow Resistant Strains

We are offering the best that can be produced in cabbage plants, by using seed of the yellow resistant strains. The disease is spreading continuously over the country, in fact so severe in some sections that cabbage growing had been discontinued, until intensive investigations had revealed the fact that this disease could be controled. Today they are growing the finest kind of cabbage crops on the same land, by using this seed from disease resistant strains.

For best results, use our plants which are grown from seed of the yellow resistant strains; Jersey Queen, Marion Market, Ahead Select, Wisconsin Ballhead, Wisconsin Alseason, Bugner and Red Hollander. We also will grow Golden Acre, Glory, Flat Dutch and Drumhead Savoy.

Early Cabbage Plants

This first lot of cabbage plants we have to offer are the drilled plants from the cold frames, which are usually ready by the middle of April. We will have the Jersey Queen, Golden Acre and Ahead Select.

Field Grown Cabbage Plants

Cabbage seed is sown in the open field in the month of March. These plants will be ready to ship early in May. We make continuous sowings to have a good supply of plants throughout the season. You will notice a lower price on the field grown plants, as the cost of producing them is less when grown in the open field.

TOMATO

Early Tomato plants

Our first supply of tomato plants are the transplanted plants from the cold frames, which are ready after May fifth. The next to be ready are drilled plants from the cold frames. They are ready about the 15th or 20th of May at a much lower rate. We will have the following varieties in the cold frames. John Baer, Marglobe, Rutgers and Stokesdale.

Field Grown Tomato Plants

The main crop of tomato plants is sown on the open field. They are drilled thin so as to make good strong plants about eight to ten inches high. They will be ready the first week of June. We will make several sowings to keep a supply on hand throughout the entire season.

You will notice that the price is lower on these plants owing to the lower cost of producing them in the open field.

We will grow the following varieties. John Bear, Marglobe, Rutgers, Stone, Scarlet Topper, Stokesdale and Small Yellow Egg.

Broccoli, Lettuce, Brussel Sprouts and Beet Plants

Our first supply of these vegetable plants are the drilled plants from the cold frames, they are ready after the middle of April. After the middle of May we can fill orders from the field grown plants at a lower rate. Will grow the following varieties. Lettuce: Big Boston Romaine, New York and Iceberg. Beets: Early Egyptian and Detroit Dark Red. Brussel Sprouts: Long Island Improved. Broccoli: Calabrese Improved.

CAULIFLOWER

The first lot we will have to offer will be the drilled plants from the cold frames. They are ready about the middle of April. After the middle of May the field grown plants will be ready. We will grow Early Snowball and Dwarf Erfurt.

CELERY

Our supply of celery plants are grown on the open field only. We are usually prepared to fill orders after June 20th. We will grow the following varieties. Golden Self Blanching, White Plum, Winter Queen, Giant Pascal and Easy Blanching.

SWEET POTATO

We will have a good supply of Sweet Potato plants and will be prepared to fill orders any time after the 1st week of May. We will grow these varieties. Up River and Kelly which are yellow, the Jersey Red and Yams.

EGG PLANT

Egg Plants are more difficult to grow than most other plants. It requires much more care and extra warmth to grow them, in fact they should not be set in the open field until weather becomes quite pleasant. Varieties: Black Beauty and Florida High Bush.

PEPPER

Pepper plants are grown in the cold frames only, as the field plants would be entirely too late to be of any use. The transplanted pepper plants will be ready by May 10th, and the drilled plants by May 20th, at a much lower rate. Varieties: Ruby King, Ruby Giant, World Beater, California Wonder, Cheese Pepper and Long Hot Cayane.

Cabbage and Tomato plants field grown \$3.00 per 1000 F.O.B. Farm

ASPARAGUS ROOTS

7

Our Roots Are Grown From High Grade Seed

Heavy Crown Asparagus Roots

Asparagus beds last for a number of years, the profit during those years depends on the foundation of the bed.

The whole secret is good thrifty roots from the best seed obtainable. What we have to offer is a select strain of Martha Washington which produces large stalks more rust resistant than others and cuts more colossal grass than any other variety including other Washington strains.

Asparagus Roots Transportation Prepaid

			25	50	100	500	1000

3yr.	No.	1 Roots	2.00	3.00	4.90		

Thrifty Rhubarb Roots

RHUBARB

This is one of the earliest crops of the season, it is easily grown. A bed will last you for a number of years.

We have two varieties. Red Victoria and Strawberry both popular varieties with large red cherry color stalks.

Our supply is limited to the two and three year old. The 2yr. will run from 1 to 1½ inches at the crown, the 3yr. will run from 1½ to 3 at the crown.

3yr.	No.	1 Roots	1.50	2.75	4.50	8.00

Horseradish Roots

One of the easiest crops to grow

Horseradish grows well in any soil. If planted in the early spring it will make large roots to dig by early fall. Horseradish can be dug any time that the ground is not frozen, or left until spring and will keep increasing in size throughout the winter.

It should be planted in a three foot row about twenty inches apart in the row. Set roots with large end up, about two inches below the surface.

We are growing the Maliner Kern variety which is superior to all others. They are very rampant in habit of growth, outyielding all, and pure white when grated.

We will have a limited amount of exceptionally nice roots cut six to eight inches long.

Horseradish Roots Transportation Prepaid

No. 1 Roots	\$0.50	\$0.85	\$1.50	\$2.50	\$9.00	\$16.00

After November first we can supply roots for grating, write for prices.

Raspberries

LATHAM Red. One of the strongest and most vigorous growers, yielding good crops of large berries. Recommended for the home garden or the commercial planter.

CHIEF Red. The earliest of red raspberries. It makes a vigorous growth and is exceptionally hardy. The fruit is not as large as the Latham, but very productive of bright red firm berries, making a variety for the general planting.

ST. REGIS Red most popular everbearing raspberry. It bears a good crop in June, then again in September and continues until freezing weather. It is medium in size and has the best of flavor,

CUMBERLAND Black. The standard of the black raspberries. The fruit is large and attractive, firm and excellent quality. Recommended for home use and distant market.

NEW LOGAN Black. This is the choice of many growers. A strong and vigorous grower, very resistant. The fruit is large glossy black, a good shipper and one week earlier than the Cumberland.

Raspberries Transportation Prepaid

12	25	50	100
\$2.00	\$3.30	\$5.50	\$9.75

Blackberries

9

ELDERADO. The most popular of all Blackberries. It is a strong upright grower, the fruit is large, jet black in color and excellent flavor.

EARLY HARVEST. The earliest to ripen, most productive of early varieties. The plants make a good strong growth. The fruit is medium to large, first quality, good flavor.

DEWBERRY LUCRETIA. The most popular and we believe to be the choice of all Dewberries. Priced the same as Blackberry plants.

Blackberries and Dewberries Transportation Prepaid

12	25	50	100
\$1.50	\$2.75	\$8.00	\$25.00

CURRANTS

PERFECTION. Most popular variety in red Currants. The plants are vigorous and very prolific. The fruit is large bright red in color and has a delicious flavor.

WILDER. Another widely known variety. It is a strong grower of large bunches of bright red berries. The flavor is good and they will hang on the bush a long time.

Currant Bushes Transportation Prepaid
